

Thin Brick KS

9 5/8" x 2 5/8" x 5/8"

Thin brick is a 5/8" cut face from a full clay brick. Once installed, it provides the appearance of a traditional full-brick wall while reducing weight and space requirements. When design or construction codes limits the use of full brick, thin brick offers an ideal solution for both interior and exterior applications. **Its lightweight profile allows installation without the need for additional structural reinforcement in most projects.**
